

The 1st International Energy Road offers!

EXCURSION

„Plant oil -

from technical use to high-quality edible oil”

Wednesday, 21 October 2009, 3 pm – 9 pm

The “Energy Company” in Gleisdorf offers a myriad of renewable energy on its premises. Solar, photovoltaic and vegetable oil circles are presented in an exhibition. Within the first Austrian vegetable oil project, which was initiated by Ökocluster, many activities were initiated and came to life. In January 2004 a filling station for vegetable oil started running on the “Energy Company’s” land.

After visiting the “Energy Company” the excursion continues with a visit to an oil mill in Pöllau. Since 1926 this oil mill has produced premium cold-pressed plant oils. All oils are homogenous, unfiltered, not refined, without additives and continually fresh pressed. A tasting of different oils is included.

An exclusive dinner at the Obermayerhofen Palace or at the Gaisrieglhof (featuring traditional Austrian ambience) will complete the excursion.

Euro 55 per person (minimum 35 persons)

Included are: guide, bus transfer, guided tour at the energy provider in Gleisdorf and at the oil mill in Pöllau, tasting of different oils, exclusive 3-course menu at the Obermayer Palace
